OVERVIEW

Catalogue at a glance

Animated first-person rig

Artist-made arms and gun in one file with hand-animated draw, fire and reload. The quality bar for the rest of the catalogue.

Model + code-built arms

A real 3D gun model, but the arms, hands and reload motion are generated in code, so they look simpler than the rigs.

Code-built gun + arms

Both the gun and the arms are generated in code. Lowest fidelity; first candidates for replacement models.
